## SurACer® 4450 - Light-curing and Isocyanate-free Doming Resin

**Seven** good reasons to use SurACer® 4450

### 1. No dangerous substances involved

**SurACer® 4450** doming material contains no Isocyanate. Its use will, therefore, produce no adverse reactions either on the skin or in the environment, which is in strong contrast with the effects of comparable polyurethane and Epoxy resins.

### 2. Cured under light

On exposure to UVA light, **SurACer® 4450** is cured within minutes and with an absolutely tack-free surface.

### 3. Stable when mixed

**SurACer® 4450** consists of two components, which will after mixing remain usable for 5 days if stored in a refrigerator. This "pot life" is much longer than with earlier doming materials and thus ensures high ease of handling.

### 4. High transparency

**SurACer® 4450** with its high transparency is three dimensional in its optical effect.

### 5. Resistant to weather and UV light

Used outdoors, **SurACer® 4450** neither discolours nor loses flexibility.

### 6. Highly adhesive

Another of **SurACer® 4450**'s advantages for doming is its long-lasting adhesion to a wide variety of materials.

### 7. Flexible

**SurACer® 4450** leads the market as the first material to permit the coating of flexible materials such as textiles.
